

## A Brand New "GEVO"-lution!

Kato's "Evolution" series takes a new step - with the introduction of the GE ES44DC variation of the popular ES44 series - this time a successor to the C44-9W rather than the AC4400CW (like its ES44AC brothers), the ES44DC is available now for the first time from Kato USA in the CSX "Box Car" paint scheme! Joining it will be a new release of the popular Canadian National ES44AC for good measure - which when combined with the previous releases of UP, CP, and BNSF, ensures national coverage of your favorite railroads from North to South!

This new release of the ES44AC and ES44DC are both available in standard Analog variations, as well as with **Kato-installed Ready-to-Run DCC and even DCC and Sound via Special Order (contact your preferred hobby retailer to order)!**

*Need some rolling stock? Kato's N Scale Gunderson MAXI-IV Well Cars are the best intermodal cars available on the market, with their special steel-plastic compound wells giving them a weighty feel and extra stability, whether empty or full. Of course, they come with a full complement of magnetic 53' Intermodal Well Cars!*

### GE ES44DC CSX "Box Car"

*This release marks the first time that Kato USA will release this locomotive designation, as well as this modern CSX paint scheme on one of its N Scale locomotives! A perfect match for your MAXI-IV cars!*
